

REMARKS

Independent claims 1 and 10 of this continuation application share many features with the independent claims in the parent application, e.g., means for increasing the area for breast extension during milk expression, but do not recite a liner of substantially uniform thickness, or a pulsation cycle. New dependent claims 11-25 recite various features of the invention not previously recited in the claims, without adding new matter.

New independent claim 26 and dependent claim 27 recite novel features of the present invention, without reciting means for increasing the area for breast extension during milk expression.

Applicants believe that this case is in condition for allowance, which is respectfully requested. The examiner should call applicants' attorney if an interview would expedite prosecution.

Respectfully submitted,

GREER, BURNS & CRAIN, LTD.
